# TES Font Installation Howto for Windows

getreu

## Revision History

Revision 1.0

19/01/16

g

Applies to Windows Vista - Windows 10.

## Install TES fonts

If you want to install the TES fonts yourself, for example on your home computer, you must first download them. You will find all the files necessary in the folder `font-files` next to this manual. Instead of downloading them individually I recommend to download the zip archive `xxxxxxx-TES_fonts` you will find in the folder *above* this one.

1. Download `..\xxxxxxx-TES_fonts.zip`
2. Unack the zip archive: Double click on it.
3. Select all files in `font-files` and copy them to a local folder of your choice. We need them only once.
4. Open the folder `font-files` and select **all** files in this folder.
5. Click-right and choose *Install* in the context menu. (You might be asked to enter your administrator-credentials).
6. To use the fonts please read the documentation in the `font-docs` folder. Start with `blockletter_font-latin_cursive-official-xxxxxxx.pdf`.

If you have trouble with the font installation procedure you may consult the [Microsoft-Documentation](http://windows.microsoft.com/en-us/windows-vista/install-or-uninstall-fonts)<sup>1</sup> for help.
